

# AMR IN THE COMMUNITY SYMPOSIUM

**MARCH '22** |

SHARING IDEAS AND  
DEVELOPMENT OF  
UNDERSTANDING TO TACKLE  
AMR IN THE COMMUNITY

# AMR in the Community Symposium March '22

## AMR- A Global Health Threat

Bacterial AMR infections accounted for around 1.27 million deaths in 2019\*

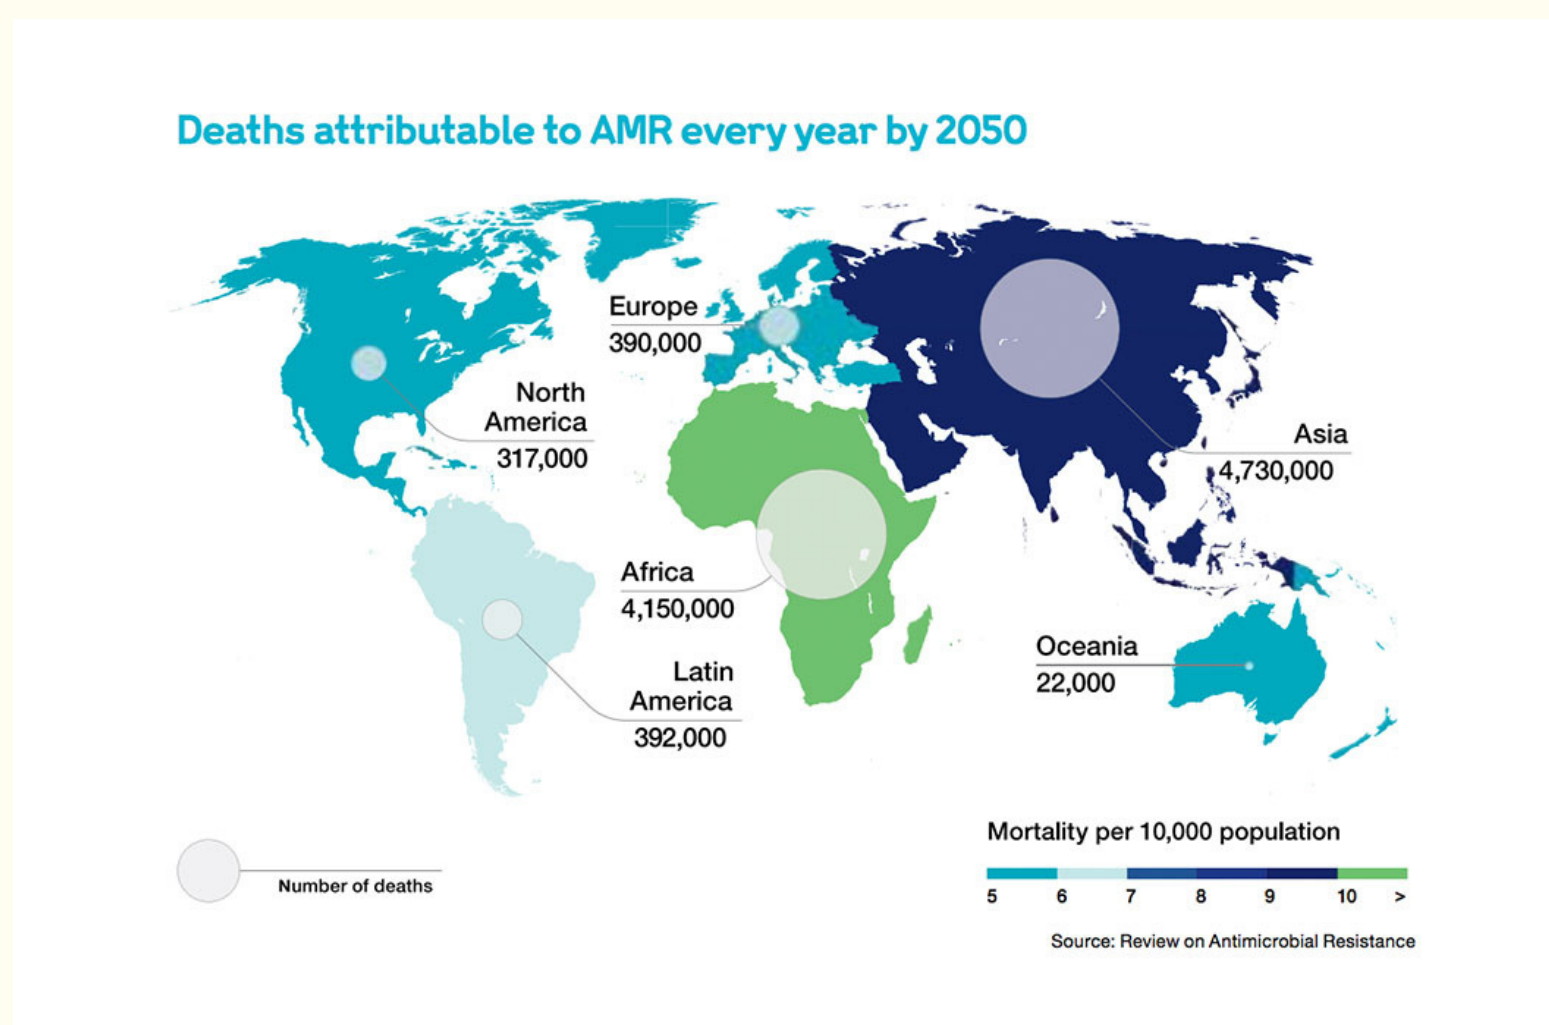

AMR places a significant strain on individuals and healthcare systems alike

## AMR in the Community

A paucity of community research particularly in LMICS

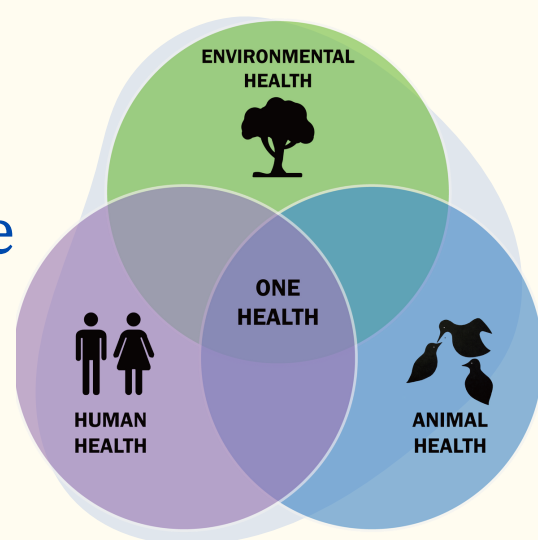

Majority of surveillance done in tertiary hospitals

Critical to develop standardised, reproducible, and viable surveillance methods for measuring AMR and antimicrobial use in the community in order to inform policy and intervention development.

## One Health Approach

- Research, surveillance & policies need a one health approach to tackle AMR in the community

## The Call

- Clinicians, Pharmacists, Microbiologists, Public health experts, Researchers,
- Poster Presentation
- Abstract Presentation
- International collaborative network

\*Global burden of bacterial antimicrobial resistance in 2019: a systematic analysis
